Announcing important news about a unique treatment option for patients with moderate to severe dry eye

**LACRISERT®**
(hydroxypropyl cellulose ophthalmic insert)
is now back in full national distribution

Aton Pharma is supporting LACRISERT® with a national marketing campaign that is generating broad awareness and demand

For patients with moderate to severe dry eye...

**Once-daily,* preservative-free LACRISERT® conserves tears for continuous all-day relief**

A unique prescription insert extends tear life for all-day lubrication and protection¹

- Improves dry eye signs and symptoms more effectively than repeated use of artificial tears²
- Preferred over artificial tears by most patients in clinical studies²-⁴
- Inserted without difficulty by most patients, even those with reduced manual dexterity due to rheumatoid arthritis⁴

*Some patients may require the flexibility of twice-daily dosing for optimal results.

**IMPORTANT SAFETY INFORMATION**

LACRISERT® is contraindicated in patients who are hypersensitive to hydroxypropyl cellulose. The following adverse reactions have been reported in patients treated with LACRISERT® but were, in most instances, mild and temporary: blurring of vision, eye discomfort or irritation, matting or stickiness of eyelashes, and red eyes. If improperly placed, LACRISERT® may result in corneal abrasion.
